
a
D3: 24-h cell counts vs PRISM
PRISM AUC (lower = sensitive)
Spearman ρ = 0.01
1,639 drug–line pairs
45 drugs
Tahoe relative fitness, top dose
(log2 pool-share, treated / control)
b
D3: within-drug agreement
Spearman ρ across cell lines
(fitness vs AUC, per drug)
median +0.05
p = 0.02
45 drugs
median +0.01
p = 0.76
38 drugs
PRISM
GDSC
c
D3: internal consistency
Mid vs top dose, same drug
(median 0.31, 195 drugs)
Two salt forms, top dose
(median 0.09, 16 pairs)
Drugs
Spearman ρ of relative fitness
across cell lines
d
D4: response magnitude vs sensitivity
PRISM (51 drugs)
GDSC (43 drugs)
Spearman ρ across cell lines
(magnitude vs AUC, per drug)
No. DE genes
RMS log2FC
RMS statistic
No. DE genes
RMS log2FC
RMS statistic
e
C2: proliferation program (pre-specified)
Spearman ρ across cell lines
(program drop vs sensitivity)
median +0.015
44 drugs
median +0.055
37 drugs
Pre-specified threshold (+0.025)
PRISM
GDSC
f
C2 per drug: PRISM vs GDSC (post hoc)
Palbociclib
Crizotinib
Dabrafenib
Erlotinib
Gefitinib
Spearman ρ = 0.44 (p = 0.041)
22 drugs in both screens
C2 ρ in GDSC
C2 ρ in PRISM
